

VOSSEBELT
kippers en containers

Quality that lasts: tippers, containers, belt unloaders and more besides

Tipper, containers, loading beds and belt unloaders: for forty years now we have been creating material-transport solutions for the road-building and agricultural sectors, as well as other industries, at our site in Geesbrug. Our durable, high-quality products are manufactured entirely in-house, ensuring we deliver the best possible service and custom products with a level of quality that sets us apart.

Our products can be adapted on request to meet your specific needs. For example, we can fit new tippers and truck-mounted cranes to a chassis in our own workshop and can offer a wide range of solutions for covering loads. Products can be fitted to new and existing containers, loading beds or tippers. From engineering through to delivery, we take care of everything in-house, which means we can deliver quickly and flexibly.

We like short lines of communication. That is why our planning and control department has an important role to play within our company. Draughtspeople and mechanical engineers translate orders clearly for production in our spacious workshop. Here we have everything we need to be able to manufacture products quickly, fit components onto a chassis and handle every aspect of the structure for your chassis, from A through to Z.

Vossebelt is part of the GB Steel Group. Within this group we are united in steel with five other companies and can handle any order individually or by working together.
